

Technical requirements

Table 1 presents the technical requirements for the cryptographic service.

Table 1 – technical requirements

Component	Requirement
Operating systems	Windows XP Windows 7 and higher
Compatible browsers	Any browser with JavaScript support

On this page:

- [Proxy server settings](#)

Additional installation is required:

- Certificate storage;
- Cryptographic software.

If non-qualified certificates (RSA) used:

- Certificate Storage (RCS) (download [english version](#));
- Certificates ([Test keys, RSA, Production environment keys, NSD certificate](#));

Proxy server settings

Additional settings for the proxy server are not required. In case of using proxy server and having some problems with the cryptographic service operations, make sure that Bypass proxy server for local address checkbox is checked in the proxy server settings.
