

Adding the NSD certificate

The NSD certificate is used for encrypting messages transmitted to the repository. To do it:

1. download the NSD certificate;
2. run Certificates storage using the **Start menu All Programs MOEX EDS DSSK or MICEX APK Client** (depending on the type of cryptography) **Certificates storage**;
3. select **Certificates storage Import Certificate** to the local storage (see Fig. 2). This will open a window to select the certificate file (Fig. 3);

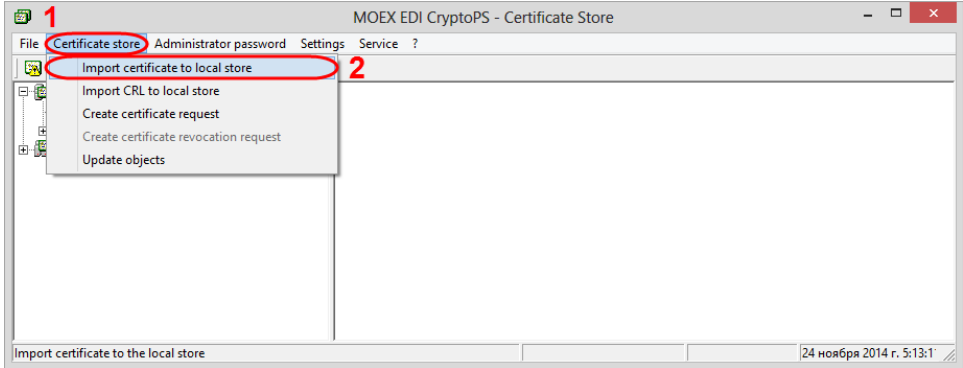

Fig. 2 – starting to import file

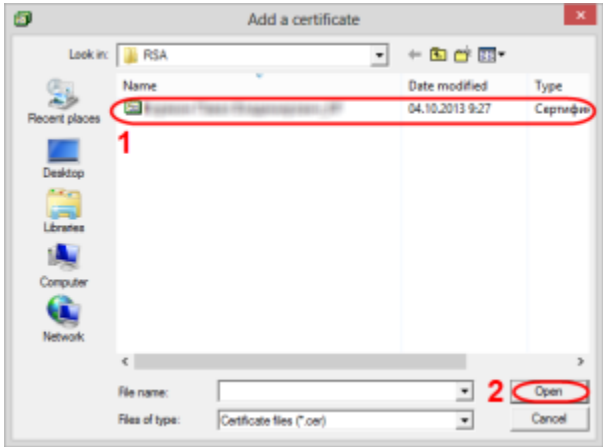

Fig. 3 – selecting a certificate

4. select the certificate file (see Fig. 3.1) and click **Open** (see Fig. 3.2). Next, the screen displays the window with information about added certificates, in which you should click **OK** (Fig. 4)
